

Professional Experience

T-Mobile US

Senior Software Engineer (Backend)

Mar 2021 - Oct 2025

- Designed and developed backend services and RESTful APIs using Java and Spring Boot to support change notifications and external application development workflows.
- Led a team of 7 developers, assigning work, reviewing GitLab merge requests, and ensuring code quality and delivery consistency across backend services.
- Acted as a technical point of contact for backend components, contributing to service design decisions and guiding implementation within the team.
- Built automation and Selenium-based testing scripts to validate web application behavior and reduce manual testing effort.
- Wrote custom SQL queries to support internal reporting and analytics needs, enabling management to consume accurate data through downstream BI tools.

Zuora

Senior Technical Consultant

May 2017 - Mar 2021

- Implemented backend-heavy business logic for billing, subscriptions, usage, invoicing, and payments across 20–30 client environments, focusing on correctness and data consistency.
- Built and maintained integration logic using Zuora APIs and Salesforce managed packages to synchronize data between Salesforce and Zuora platforms.
- Developed custom functionality using Salesforce Apex and SOQL, and wrote supporting code in Java and Ruby within Zuora Connect and workflow-based execution environments to implement client-specific logic.
- Partnered with solution architects to translate business requirements into technical implementations, contributing practical design input based on platform constraints.
- Served as a technical point of contact by reviewing implementations, unblocking engineers, and working directly with clients to clarify requirements and debug production issues.

Daugherty Business Solutions

Software Engineer

Jan 2015 - May 2017

- Developed and maintained a Java-based web application using the Spring Framework, packaged as WAR files and deployed to a Resin application server.
- Implemented core backend logic for pricing calculations, bookings, and room inventory management, ensuring correctness and scalability across a large hotel portfolio.
- Worked extensively with Oracle SQL to design queries and data access logic supporting transactional and reporting needs.
- Contributed to server-side rendered UI using JSP and plain JavaScript (including jQuery), supporting end-to-end application functionality.
- Introduced versioned deployments and improved release management practices within the team, reducing deployment risk and increasing release reliability.

Skills

Languages

Java, Python, JavaScript, SQL, Salesforce Apex

Backend & APIs

RESTful APIs, Spring Boot, Django, Flask

Cloud & DevOps

Docker, AWS, GitLab CI/CD

Data & Platforms

Oracle SQL, Salesforce, Zuora, Firebase

Education

Georgia State University, 2014

B.S., Computer Science
